

Introducing e-VDS Plus

electronic Veterinary Dental Scoring
by the European Veterinary Dental Society (EVDS)
The revolutionary dental
scoring system that's just a
click away!

Proudly sponsored by iM3 -
The Veterinary Dental Company
& Virbac.

**REGISTER
ONLINE NOW!**

How does it work?

- **1st step:** registration as a user
- **2nd step:** setting up clinic data
- **3rd step:** selecting language for the printout; five standard languages and an option for translation into any language
- Scoring on dental chart by clicking the mouse
- Choice between puppy or adult dentition and single or multi tooth scoring
- Recorded data can be printed, downloaded as PDF or sent by email

The value of e-VDS Plus

For the vet:

- The clinical findings are scored on dental charts (by David Crossley) which provides thorough documentation and history for each patient
- The tutorials made available during the process will help train vets in dentistry with minimal effort
- Individual clinic scoring sheet with your own practice logo and header will help build reputation and loyalty

For the pet owner:

- The owner is involved in the process
- Printout with the assessment of their pet
- A legend explaining the findings of the scoring
- Provides a chance to follow the development of treatment or prophylaxis
- Encourages follow-up

Why e-VDS Plus?

iM3 and Virbac's role, as worldwide leaders in veterinary dentistry, is to help the market expand. e-VDS Plus was designed to make dentistry more systematic and encourage vets (or their staff) to spend enough time looking at the oral cavity during the annual check. e-VDS is an interactive way to raise the level of education of general practitioners in veterinary dentistry, thanks to a practical process and **unique iconography**.

Where to find it?

You can find e-VDS Plus on the brand new EVDS website www.evds.org or on the iM3 or Virbac website.

iM3 Small Animal Dental Equipment

Companion Animal Veterinary Dental Sealant

**Dog Before Professional Dental Cleaning
& SANOS®**

**Dog 6 Months After Professional Dental Cleaning
& SANOS®**

NOTE: Be sure to apply a thick film to any observed trouble spots such as the carnassial upper 4th premolar 208 and upper 3rd premolar 207. Compare gingival margin at the upper 3rd premolar 207 in photos: Before Professional Dental Cleaning & SANOS® and 6 Months After Professional Dental Cleaning & SANOS®.

SANOS® is applied after every professional dental cleaning to protect under the gumline and the 'difficult to reach' areas such as under the gums of the back (caudal) teeth. SANOS® is a gingival dental sealant for dogs and cats that seals the subgingival gum line (gingival sulcus) against the formation of plaque. Clinically proven to last for 6 months without any take-home application required.

- Acts like a liquid bandage that seals the subgingival line (gingival sulcus) against the formation of plaque
- Designed to allow water and oxygen to pass through
- Professional veterinary application, dries clear and rapid
- One easy application every six months helps to greatly extend the benefits of a professional dental cleaning
- Use in conjunction with a six month wellness program to promote better overall health
- Apply at spay or neuter to help the client get started on the path to wellness.

SANOS Veterinary Dental Sealant - Single Application Kit

(4 applicator brushes, 1 dental workstation, 1 1/16 oz product vial and cap)

€41.00
